

Budgestic Testing Summary

Project: Budgestic – AI-Powered Budgeting & Receipt Analysis App
Team: Rajat Adhikari, Biraj Thapa, Bishwash Thapa

1. Introduction

This testing summary explains the tests carried out for the Budgestic mobile application design. The purpose of testing was to check whether the app screens, navigation flow, interface layout, and user journey were clear and functional.

Testing focused on app interaction, navigation, usability, visual consistency, and feature representation.

2. Testing Objectives

The main testing objectives were:

- 1. To confirm that users can navigate the app easily.
 - 2. To test whether the main screens are connected correctly.
 - 3. To check whether the app layout is clear and user-friendly.
 - 4. To verify that the app demonstrates the receipt upload process.
 - 5. To verify that expense tracking and cash flow screens are understandable.
 - 6. To check whether spending insight and prediction screens are clearly presented.
 - 7. To identify design, navigation, and usability issues.
 - 8. To confirm that the app is suitable for demonstration.
-

3. Testing Types

Testing Type	Purpose
Navigation Testing	To check movement between screens.
UI Testing	To check layout, colours, spacing, and readability.
Usability Testing	To check whether users can understand the app flow.
Functional Testing	To check whether planned functions are represented clearly.
Presentation Testing	To check whether the app is suitable for final demonstration.

4. Test Cases

Test ID	Test Case	Test Steps	Expected Result	Actual Result	Status
TC01	Open app design	Open the app design link	App design opens successfully	App design opened successfully	Pass
TC02	Welcome screen display	View the first screen	Welcome screen displays correctly	Welcome screen displayed	Pass
TC03	Login navigation	Click login option	Login screen opens	Login screen opened	Pass
TC04	Create account navigation	Click create account option	Create account screen opens	Create account screen opened	Pass
TC05	Dashboard navigation	Continue from login screen	Dashboard screen opens	Dashboard screen opened	Pass
TC06	Receipt upload screen	Select receipt/upload option	Receipt upload screen opens	Receipt upload screen opened	Pass
TC07	Expense tracking screen	Select expense tracking option	Expense screen opens	Expense screen opened	Pass
TC08	Cash flow report screen	Select report/cash flow option	Report screen opens	Report screen opened	Pass
TC09	Spending insight screen	Select insights option	Spending insights screen opens	Insights screen opened	Pass
TC10	Prediction screen	Select prediction option	Prediction screen opens	Prediction screen opened	Pass
TC11	Notification screen	Select notification option	Notification screen opens	Notification screen opened	Pass
TC12	Profile/settings screen	Select profile/settings option	Profile/settings screen opens	Profile/settings screen opened	Pass
TC13	Button consistency	Review buttons across screens	Buttons are consistent	Buttons mostly consistent	Pass
TC14	Text readability	Review headings and labels	Text is readable	Text readable	Pass
TC15	Visual consistency	Review colours, spacing, and layout	Design is consistent	Design mostly consistent	Pass

5. Testing Results Summary

The Budgestic app passed most usability and navigation tests. The main screens were accessible, the layout was understandable, and the user journey from welcome screen to dashboard and feature screens was clear.

The app successfully demonstrates the key features, including receipt upload, expense tracking, cash flow reporting, spending insights, prediction, notifications, and profile settings.

6. Issues Found

Issue	Description	Priority	Suggested Fix
Backend integration required	App requires future backend/data processing implementation.	High	Convert Figma design to Flutter app.
OCR integration required	Receipt scanning requires OCR processing.	High	Implement Tesseract OCR.
AI insights require data	Spending insights require user data and AI/ML model.	Medium	Add AI/ML model in future implementation.
Database connection required	App needs local storage for user and expense data.	Medium	Add SQLite local database.
Some interaction improvements needed	More interactive transitions can be added.	Low	Add more clickable transitions and animations.

7. Conclusion

The testing results show that the Budgestic app meets the main design and demonstration requirements of the project. The app clearly presents the intended system functions, user journey, and interface design.

Further development should focus on converting the design into a working Flutter mobile application with OCR, SQLite storage, and AI-based spending analysis.
